                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Description

The oligonucleotides can be used to activate B cells and natural killer cells. They can be used for treating, preventing or ameliorating an immune system deficiency, e.g. a tumour, cancer or a viral, fungal, bacterial or parastitic infection. They are also useful in stimulating a subject's response to a vaccine
                                                                                                                                                                                                                                                                                                                                        Immunomodulatory oligonucleotide contg. unmethylated C-G dinucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Immunomodulatory oligo:nucleotide(s) contg. an un-methylated CpG dinucleotide - used for stimulating activity or when methylated for inhibitory activity.
                                                                                                                                                                                                                                                                                                                                                       Unmethylated, immunomodulator; B cell activation; vaccine, response stimulation; autoimmune disease; infection; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence represents an unmethylated CpG dinucleotide, and can be used in the method of the invention. The method is for treating a subject waving, or at risk of having an acute decrement in air flow, comprising administering a nucleic acids encoutaining at least one daministering a nucleic acids containing an unmethylated CpG unmethylated CpG. The nucleic acids containing an unmethylated CpG dinucleotide affect an immune response in a subject by activating natural killer cells (NK) or redirecting a subject's immune response from a Th2 to a Th1 response by inducing monocytic and other cells to produce Th1 cytokines. They can be used to treat pulmonary disorders having an immune component, such as asthma or environmentally induced airway disease. They can also be used to treat diseases associated with Grampositive bacterial infections or endotoxaemia including bacterial meligits, neonatal sepals, cystic fibroals, inflammatory bowel disease and liver cirrhosis, Gram-negative pneumonia, Gram-negative abdominal abacess, haemorrhagic shock, disseaminated intravascular coagulation, or an inflammatory response to lipopolysaccharide

AAV27641-751 represent immunostimulatory oligodeoxyribonucleotides (ODNs)

Cof the invention. The ODNs contain at least one unmethylated CpG

dinucleotide, and have the formula: 5' MIXIGGARN2 3', where at least one

controlled separates consecutive CpGs, XI is adenine, guanine, or

thymine, X2 is cytosine or thymine, N is any nucleotide and N1+N2 is 0-26

CC thymine, X2 is cytosine or thymine, N is any nucleotide and N1+N2 is 0-26

CC bases with the provision that NI and N2 does not contain a CCGG tetramer

CC or more than one CGG or CGG trimer OR 5' NXIX2CGA3X4N 3', where at least

CC one nucleotide separates consecutive CpGs, XI and X2 are selected from

CG GpT, GpG, GpA, ApT and ApA, X3and X4 are selected from TpT or CpT', N is

CC does not contain a CCGG tetramer or more than one CCG or CGG trimer. The

CC does not contain a CCGG tetramer or more than one CCG or CGG trimer. The

CC does not contain a CCGG tetramer or more than one CCG or CGG trimer.

CC does not contain a Th2 to a Th1 (e.g. by inducing monocytic cells and other

CC ells to produce Th1 cytokines, including In-12, IFN-gamma and GM-CSF).

CT he ODNs can be used to treat or prevent an asthmatic disorder,

autoimmune diseases, in desensitisation therapy, as an artificial

CC human and adjuvant during antibody generation in a mammal such as a mouse or a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
New immunostimulatory nucleic acid molecules - which contain at least one unmethylated CpG dinncleotide, used for treating e.g. tumours, infections or autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

AAV74237-V74253 are oligodeoxynucleotide (ODN) primers used to describe a method for enhancing the immunostimulatory effect of an antigen encoded by nucleic acid contained in a nucleic acid construct. The method involves determining the CpG-N and CpG-S motifs present in the construct, removing neutralising CpG (CpG-N) motifs and optionally inserting stimulatory CpG (CpG-S) motifs in the construct, thereby producing a nucleic acid construct having enhanced immunostimulatory efficacy. The method can be used for immunisation against viral antigens, e.g. from hepatitis B virus (HBV), bacterial antigens or an antigen derived from a parasite. They can also be used for expression of a therapeutic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        polypeptide, e.g. growth factors, toxins, tumour suppressors, cytokines, apoptotic proteins, interferons, hormones, clotting factors, ligands and receptors. (Updated on 20-MAR-2003 to correct PA field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          method for enhancing the immunostimulatory (c), the method by nucleic acid contained in a nucleic acid construct. The method by nucleic acid contained in a nucleic acid construct. The method removing actermining the CpG-N and CpG-S motifs present in the construct, removing neutralising CpG (CpG-N) motifs and optionally inserting stimulatory CpG (CpG-N) motifs in the construct, thereby producing a mucleic acid construct having enhanced immunostimulatory efficacy. The method can be used for immunisation against viral antigens, e.g. from hepatitis B virus (HBV), bacterial antigens or an antigen derived from a parasite. They can also be used for expression of a therapeutic polypeptide, e.g. growth factors, toxins; tumour suppressors, cytokines, apoptotic proteins, interferons, hormones, clotting factors, ligands and receptors. (Updated on 20-MAR-2003 to correct PA field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a microdroplet emulsion (microemulsion) with an adsorbent surface, and which comprises a metabolisable oil and an emulsifying agent (a detergent). It also relates to a composition comprising the microemulsion and a microparticle with an adsorbent surface, where the microparticle comprises a polywer selected from a composition.

Natural killer and T cells are activated by exposure to oligonucleotides containing CpG motifs. Oligonucleotides containing CpG motifs can be used as adjuvants in vaccines. The present invention relates to a CpG receptor. The CpG receptor contains a Toll homology domain (THD). The Toll receptor family are associated with responses to pathogens. CpG oligonucleotides may act as stimulators of various immune responses. The CpG receptor or cells expressing the receptor are useful for identifying a compound which binds to or modulates an activity of the CpG receptor. The compounds are useful in e.g. vaccine adjuvants promoting cellmediated immune responses, antibacterials, (e.g. protection from Listeria infection), tumour immunotherapy, allergy treatment, (e.g. suppressing IgE in human PBMC, shifting from Th2 to Th1) and as anti-inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    agents (e.g. for use in cystic fibrosis, sepsis, heart disease, chlamydia, inflammatory bowel disease, arthritis and multiple sclerosis). The present sequence represents a CpG motif containing oligonucleotide used in examples demonstrating that CpG oligonucleotides can activate the

The present invention relates to a composition comprising an isolated immunostimulatory nucleic acid which comprises unmethylated cytosine-guanine (CpG) dinucleotides and an antigen in a carrier. The present sequence is an oligonucleotide, which was used in the present invention. The immunostimulatory nucleic acids are useful for ameliotrating an immune subject. The immunostimulatory nucleic acids are also useful for a subject. The immunostimulatory nucleic acids are also useful for desensitising a subject against the occurrence of an allergic reaction in response to contact with a particular allergen. The immunostimulatory nucleic acids are also useful for vaccination and for treating leukaemia in a subject on administration prior to or in conjunction with a chemotherapy, so that the subject or in conjunction with a chemotherapy. The compositions are useful for inducing an antigen specific immune response in the subject. The compositions can be also

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes methods for inducing interleukin 6 (IL-
killer cell lytic activity. The methods comprise administering to the
subject or exposing a natural killer cell to an immunostimulating natural
acid. Also described are: (1) inducing IL-6 in a subject comprising
administering to the subject to induce IL-6 in the subject to
immunostimulatory nucleic acid; (2) stimulating natural killer cell lytic
activity comprising exposing a natural killer cell to the
immunostimulatory nucleic acid to stimulate natural killer cell lytic
activity; (3) inducing interferon-gamma in a subject to treat an immune
system deficiency comprising administering to the subject to induce
system deficiency comprising administering to the subject to induce
inducing IL-12 in a subject comprising administering to the subject to inducing inmunostimulatory nucleic acid. The methods are useful for inducing IL-6,
immunostimulatory nucleic acid. The methods are useful for inducing IL-6,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     interferon-gamma or IL-12, or stimulating natural killer cell lytic estivity in a subject, particularly a human. The methods are particularly useful for modulating an immune response. A4450571 to A4450671 represent oligonucleotide sequences used in the exemplification of the present

The present invention describes an improvement to a method requiring the administration of interferon alpha (IFN-alpha), involving administering an immunostimulatory nucleic acid (ISNA). The sequences of a number of such nucleic acids are also provided. These may comprise oligonucleotides with phosphorothicate backbones, palindromes, or G-rich sequences. The agequences of the invention are useful in the treatment of proliferative diseases, such as cancers, and viral infections. The present sequence is an example of an immunostimulatory oligonucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CpG oligodeoxynucleotide; unmethylated; antigen-presenting cell; immunogenic; cytokine release; natural killer cell; NK cell activation; cell-mediated immune response; T-cell response; humoral response; B-cell response; antibody production; immune response induction; vaccine; allergy; asthma; infection; bacterial; viral; fungal; protozoal; parasitic; tuberculosis; AIDS; autoimmune disease; lupus erythematosus; rheumatoid arthritis; multiple sclerosis; solid tumour; cancer; immune deficiency; biological warfare agent; cytostatic; antiarthritic; antimicrobial; antiallergic; protozoacide; tuberculostatic; antiarthritic; antiasthmatic; dermatological; phosphorothioate; ss.
                                                                                                                                             Improving the efficacy of treatments involving the administration (interferon-alpha by co-administering an isolated immunostimulatory nucleic acid.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes an improvement to a method requiring the administration of interferon alpha (IFN-alpha), involving administering an immunostimulatory nucleic acid (ISNA). The sequences of a number of such nucleic acids are also provided. These may comprise oligonucleotides with phosphorothicate backbones, palindromes, or G-rich sequences. The agequences of the invention are useful in the treatment of proliferative diseases, such as cancers, and viral infections. The present sequence is an example of an immunostimulatory oligonucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Immunostimulatory nucleic acid; ISNA; human; interferon alpha; IFN-alpha;

The invention relates to novel immunogenic CpG oligodeoxynucleotides (AAC80581-C80723). The oligonucleotide are at least 10 bases long and comprise one of the generic sequences 5'-NNNT-20G-WNNN-3' or 5'-RY-CpG-RY -3'. The central CpG motif is unmethylated, and the oligonucleotides optionally have phosphorothioate linkages which make them more resistant co degradation. The invention also relates to an oligonucleotide delivery complex comprising an oligonucleotide of the invention and a targetting agent, and a pharmaceutical composition comprising the oligonucleotide delivery complex. The oligonucleotides are able to induce either a cell-mediated (T-cell) response or a humoral (B-cell, antibody) response, with oligonucleotides of the sequence 5'-RY-CpG-RY-3' being able to induce a cell-mediated response, and those of the sequence 5'-NNNT-CpG-WNN-3' cell-mediated response, and those of the sequence 5'-NNNT-CpG-WNN-3' cell-mediated or induce a humoral response. It is thought that after administration, the oligonucleotide acts on antigen-presenting cells (e.g., macrophages and dendritic cells), which then release cytokines, cell-adding to activation of natural killer (KK) cells. A cell-mediated or humoral response can then occur by activation of T- or B-cells. The induction of an immune response is useful for treating, preventing or anneliorating an allergic reaction (preferably asthma), or an infection, where an immunogenic CpG oligonucleotide is administered either alone or in combination with an anti-allergenic agent or anti-infectious agent. Thinitis , hayfever, unticaria, food allergies and other actopic.

The allergic conditions which may be treated include viral, the secondarial, fungal and protozoal infections such as tuberculosis, Albs, inserting and the infections with elementary elementary of an anticipant of an anticipan
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                          allergies, cancer, and autoimmune disorders and for ameliorating symptoms resulting from exposure to a bio-warfare agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        exposure to an agent of biological warfare. An immunogenic CpG oligonuclectide, either alone or in combination with an anti-cancer agent, is useful for treating solid tumour cancer. The induction of an immune response is used in antisense therapy and to improve the efficacy of a vaccine. The oligonuclectide is preferably administered to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           lymphocytes ex vivo, producing activated lymphocytes which are then administered to the host. The present sequence represents an immunogenic CpG oligodeoxynucleotide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 [mmunostimulatory CpG oligonucleotide WD1004 for use in an HIV vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        used in the treatment of an autoimmune disorder (e.g., lupus erythematosus, rheumatoid arthritis and multiple sclerosis), a disease associated with immune system deficiency, and symptoms resulting from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

```
The invention relates to an HIV vaccine comprising an HIV antigen and an immunostimulatory oligonucleotide (AAF59501-AAF59508). With the exception of oligonucleotide WD1005 (AAF59505), the immunostimulatory oligonucleotides contain at least one unmethylated CpG motif. In preferred embodiments the internucleotide linkage is phosphorodithioate, although phosphodiester and other internucleotide bonds, or mixtures of linkages are within the scope of the invention. The HIV antigen may be selected from gp160, gp120, Nef, Tat, and Nef or Tat derivatives or fusion proteins. The vaccine is used for the prophylaxis or treatment of HIV infection in a patient. The present sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Vaccine, cytostatic, virucidal; bactericidal; fungicidal; anti-parasitic; imminostimulatory; tumour; viral infection; bacterial infection; fungal infection; parasitic infection; encer; asthms; infection adisease; allergy; immune deficiency; phosphorothioate; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                         The present invention relates to a method for stimulating an immune response. The method comprises administering an immunostimulatory nucleic acid to a non-rodent subject in sufficient quantity to stimulate an immune response. The present sequence is one such immunostimulatory nucleic acid. The immunostimulatory nucleic acids can be pyrimidine rich (py-rich) or thymidine (T) rich. The method is used to vaccinate subjects against tumour antigens, viral antigens (e.g. herpesviridae, retroviridae and/or orthomyxoviridae), bacterial antigens (e.g. toxoplasma, hasemophilus, campylobacter, clostridium, Escherichia coli and/or staphylococus), fungal antigens and/or parasitic antigens. The method is also useful for preventing cancer, asthma, infectious disease, allergy or immune deficiency. The present sequence can also be used to redirect a Thi immune response and to activate immune cells. Note: the

                        response. The method comprises administering an immunostimulatory uncleic acid to a non-rodent subject in sufficient quantity to stimulate an immunostimulatory in sufficient quantity to stimulate an nucleic acid. The present sequence is one such immunostimulatory nucleic acids can be pyrimidine rich (py-rich) or thymidine (T) rich. The method is used to vaccinate subjects against tumour antigens, viral antigens (e.g. herpesviridae, retroviridae, haemophilus, campylobacter, clostridium, Escherichia coli and/or staphylococcus), fungal antigens and/or parasitic antigens. The method is also useful for present sequence can also be used to redirect a Thi immune response and to activate immune cells. Note: the

1st strand cDNA was primed with a Not1-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCWWSpORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                GSS 17-JUN-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pecora; Bovidae; Bovinae; Bos.

Thotae Torgan: immature ear; Vector: pAD-GAL4; Site 1:
BCORI; Site 2: XhOI; Schmidt lab dissected immature ears
between 0.5 cm - 2.0 cm. Sharon Stanfield prepared the
CDNA library in HybrizAP. Positive selection by probing
with the pooled full-length cDNA of the following MADS box
genes: ZAGL9B, ZAGL17, SI, ZAG1, ZAG1, ZAG1, ZANIA,
ZAM2, and ZPLA. Negative selection by probing with pooled
3'-end fragments of the same DNA. The final library is
derived from a total of 210 selected plaques that
the 3'-end cDNA probes."

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSDORT & vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                   (http://www.chori.org/bacpac/bovine240.htm). For BAC library availability, please contact Pieter de Jong (pdejong@mail.cho.org). Clones may be purchased from BACPAC Resources (http://www.chori.org/bacpac/ordering_information.htm). This work was undertaken as part of the International Bovine BAC Mapping Consortium (IBBMC) by CSIRO Livestock Industries, Australia and the British Columbia Genome Sciences Centre, Canada.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

Oligo(dT)-SL2b PCR based library. Pristionchus pacificus mixed stage cDNA PCR products of size >400 nucleotides containing SL2b (GGTTTTAACCAGTATCTCAAG) on the 5' end and oligo(dT) on the 3' end were non-directionally cloned into pCRII-TOPO(Invitrogen) following the Topo TA cloning protocol."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
